Zoe III For Full-size Broadcast Cameras

The Zoe III provides optimal zoom control in a compact, user-friendly remote that easily mounts to tripod panhandles. Zoe III offers innovative remote functionality, including Variable Stepless Zoom Speed Control, Record Start/Stop Button, Return Function, & Reversible Zoom Direction.

The system incorporates electronic software to prevent stuttering when changing speed or direction. The touch-responsive rocker switch provides for truly stepless zooms, silky smooth ramp-up & precise manipulation. Operators can ease into a zoom gently and evenly, then abruptly reverse at top speed without a glitch.

Directional zoom selector switch & speed adjustment knob are easy to locate, set and read. The unit also features an ergonomic jack & a counter-sunk potentiometer to avoid accidental activation. A quick-release clamp facilitates attachment up to 34mm diameter panhandles.

Zoe III is available in 3 configurations:
Zoe-8C for Canon 8-pin lenses, Zoe-8F for Fujinon 8-pin lenses, Zoe-12F for Fujinon 12-pin lenses. Converter cables also available.
